CORE SKILLS

- React • Node.js • Express
- MongoDB • Mongoose • MySQL
- PHP • Laravel
- JavaScript • TypeScript
- System Design
- Docker & Containerization
- CI/CD & Deployment
- Redis & Rate Limiting
- Load Balancing
- Horizontal Scaling
- Git & GitHub

TOOLS & PLATFORMS

- Docker • Git • GitHub
- Vite • Tailwind CSS
- MongoDB Atlas
- Render • Vercel
- Postman
- WSL2 • Linux

KARTIKEYA MISHRA

FULL-STACK DEVELOPER | DEVOPS & SYSTEM DESIGN

PROFESSIONAL SUMMARY

Full-stack developer building practical, production-oriented applications with a strong focus on backend engineering, system design and DevOps. Experienced across MERN, PHP/Laravel, JavaScript/TypeScript, databases, authentication, deployment and Docker. Currently going deeper into Redis, rate limiting, load balancing, horizontal scaling and CI/CD.

EXPERIENCE

Independent Full-Stack Developer

2025 · PRESENT

- Built and deployed complete web applications across frontend, backend, database and hosting.
- Implemented cookie/JWT authentication, protected routes, admin controls and password workflows.
- Designed REST APIs using Node.js, Express and Mongoose, plus Laravel/MySQL applications.
- Applied practical system-design concepts: caching, rate limiting, load balancing and horizontal scaling.
- Using Docker and CI/CD to make projects repeatable, deployable and production-oriented.

PRIORITY PROJECTS

Whylong — URL Shortener

https://whylong.vercel.app

URL shortening platform with link management and QR-code capabilities. Built and deployed as a practical product project.

Xpense Tracker — MERN

Finance platform with JWT auth, admin controls, categories, analytics, profit/loss views, filters and PDF/Excel exports; deployed.

Multiplayer Tic-Tac-Toe

React + Node/Express multiplayer project, followed by experimentation with real-time communication.

Heritage Junction — Laravel

Travel application using Laravel, Inertia React and MySQL with destinations, packages, itineraries and booking flows.

ENGINEERING KNOWLEDGE

- System design: SQL vs NoSQL, API boundaries, caching, scaling and practical trade-offs.
- Backend: REST APIs, middleware, authentication, cookies, validation and database modeling.
- DevOps: Docker images/containers, networking, volumes, deployment and CI/CD foundations.
- Scalability: Redis, rate limiting, load balancers and horizontal scaling.

LEARNING JOURNEY

Started with Java, then expanded into C, web development, databases and Git/GitHub. Progressed through MERN, PHP and Laravel while adding TypeScript, Python and DevOps foundations. Current focus: depth, engineering maturity and production-grade practices.

STRENGTHS

- Problem solving
- Fast learner
- Engineering mindset
- Practical builder
- Continuous improvement

LANGUAGES

- English
- Hindi

CAREER OBJECTIVE

To grow as a strong software engineer by understanding how reliable, scalable systems are designed, deployed and operated — combining full-stack development with DevOps and system-design thinking.
